PERFORM DIFFERENT ARITHMETIC OPERATIONS ON NUMBERS IN PYTHON

AIM:

To perform different arithmetic operations on numbers in python

ALGORITHM:

1. **Start** the program.
2. **Prompt** the user to enter the first number and store it in num1.
3. **Prompt** the user to enter the second number and store it in num2.
4. **Perform addition** and display the result.
5. **Perform subtraction** and display the result.
6. **Perform multiplication**, **division**, **floor division**, and **modulus**.
7. **Display all results** and then **end** the program

PROGRAM

```
num1 = float(input("Enter the first number: "))
num2 = float(input("Enter the second number: "))

add = num1 + num2
sub = num1 - num2
mul = num1 * num2
div = num1 / num2
floordiv = num1 // num2
mod = num1 % num2

print("-- Arithmetic Operations ---")
print("Addition:", add)
print("Subtraction:", sub)
print("Multiplication:", mul)
print("Division:", div)
print("Floor Division:", floordiv)
print("Modulus:", mod)
```

RESULT:

Thus the program perform different Arithmetic Operations on numbers in python is executed successfully.
