ILLUSTRATE A PYTHON PROGRAM TO FIND THE LARGEST OF THREE NUMBERS

AIM:

To Illustrate a python program to find the largest of three numbers

ALGORITHM:

1. **Start** the program.
2. **Input** three numbers from the user — num1, num2, and num3.
3. **Compare** num1 with num2 and num3.
4. If num1 is greater than both, then **num1 is the largest**.
5. Else if num2 is greater than num3, then **num2 is the largest**.
6. Otherwise, **num3 is the largest**.
7. **Display** the largest number and **end** the program.

PROGRAM:

```
num1 = float(input("Enter the first number: "))
num2 = float(input("Enter the second number: "))
num3 = float(input("Enter the third number: "))

if num1 >= num2 and num1 >= num3:
   largest = num1
elif num2 >= num1 and num2 >= num3:
   largest = num2
else:
   largest = num3

print("The largest number is:", largest)
```

RESULT:

Thus the program to find the largest of three numbers has been executed successfully.
