WRITE A PYTHON SCRIPT TO PRINT THE CURRENT DATE IN FORMAT" MONTH DATE YEAR"

AIM

To write a python script to print the current date in format" month date year".

ALGORITHM

1. Start the program.
2. Import the datetime module.
3. Get the current date using datetime. date. today().
4. Extract the **month**, **date**, and **year** from the current date.
5. Convert the month number into the month name.
6. Display the date in the format **Month Date Year**.
7. Stop the program.

PROGRAM

```
import datetime

today = datetime.date.today()

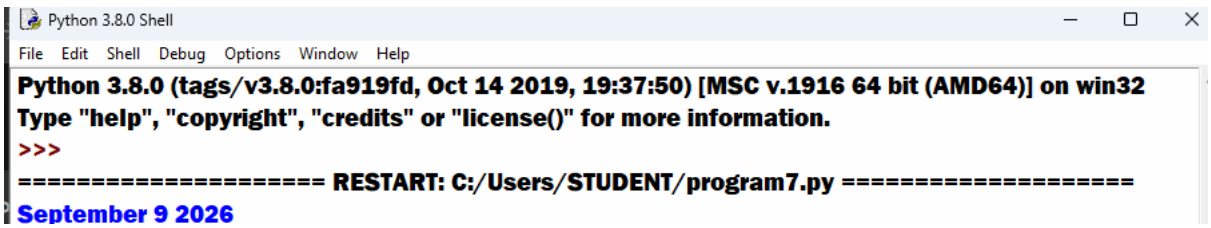
month = today.strftime("%B")

date = today.day

year = today.year

print(month, date, year)
```

OUTPUT



RESULT

Thus, the program to write a python script to print the current date in format" month date year" is executed successfully.
