EX.NO.9

09-09-2026

Display the elements of the list in reverse order using data structures concept.

Aim

To display the elements of the list in reverse order using data structures concept.

Algorithm

1. Start the program.
2. Import deque from collections.
3. Create an empty queue.
4. Get the number of elements from the user.
5. Read elements at run time and insert them into the queue.
6. Remove elements from the rear and display them.
7. Stop the program.

Program

```
from collections import deque

queue = deque()

n = int(input("Enter number of elements: "))

for i in range(n):

    element = int(input("Enter element: "))

    queue.append(element)

print("Elements in reverse order:")

while queue:

    print(queue.pop())
```

OUTPUT

```
================================================
Enter number of elements: 3
Enter element: 10
Enter element: 20
Enter element: 30
Elements in reverse order:
30
20
10
```

RESULT

Thus the program to display the elements of the list in reverse order using data structures concept is executed successfully.
