CREATE A PYTHON PROGRAM TO AUTOMATE LOGIN TO A WEBSITE USING SELENIUM

AIM

To create a python program to automate login to a website using Selenium.

ALGORITHM

Step 1: Start the program.
Step 2: Create an HTML webpage (**index.html**) containing a login form with username, password, and login button.
Step 3: Import required modules (**webdriver**, **By** from **selenium**, and **time**).
Step 4: Launch the Chrome browser using WebDriver.
driver = webdriver.Chrome()
Step 5: Open the local webpage URL using **driver.get()**.
driver.get("http://localhost:8000")
Step 6: Find username and password input elements by ID and enter credentials using **send_keys()**.
driver.find_element(By.ID, "username").send_keys("student123")
driver.find_element(By.ID, "password").send_keys("pass123")
Step 7: Find the login button by ID and trigger submission using **click()**.
driver.find_element(By.ID, "login-button").click()
Step 8: Wait to view the login result, quit the browser session, and stop the program.

PROGRAM

index.html:

```
<!DOCTYPE html>

<title>Student Login</title>

<style>

  body { display: grid; place-content: center; height: 100vh; font-family: system-ui; }

  form { display: grid; gap: 8px; width: 240px; }

  #successMessage { color: green; text-align: center; }

</style>

<form onsubmit="event.preventDefault(); successMessage.hidden = false">

  <h3 style="text-align:center; margin:0">Student Portal</h3>

  <input id="username" placeholder="Username" required>

  <input type="password" id="password" placeholder="Password" required>
```

```
  <button id="login-button">Login</button>
  <div id="successMessage" hidden>Login Successful!</div>
</form>
```

selenium_login.py:

```
from selenium import webdriver
from selenium.webdriver.common.by import By
import time

# 1. Open Chrome Browser
driver = webdriver.Chrome()

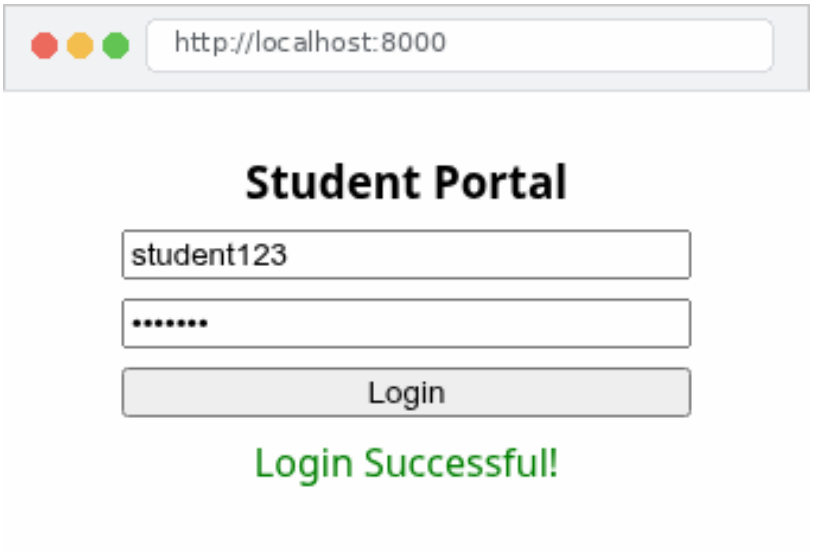

# 2. Open Localhost Website
driver.get("http://localhost:8000")
time.sleep(2)

# 3. Find input fields and type credentials
driver.find_element(By.ID, "username").send_keys("student123")
driver.find_element(By.ID, "password").send_keys("pass123")

# 4. Click Login Button
driver.find_element(By.ID, "login-button").click()

# 5. Wait to view result and close browser
time.sleep(5)
driver.quit()
```

OUTPUT

RESULT

Thus, the program to automate login to a website using selenium is executed successfully.
