Program 7

Creating “Hello world” extension in chrome

Algorithm

1 Create helloworld folder

2. Open notepad type the code and save it as manifest.json

3.Download the image save as hello_extensions.png

4.Type the html code in notepad and save it as hello.html

5.Now go to chrome,click 3dots in the top right corner->go to extensions->manage extensions.

6.Switch to developer mode, in the top right corner

7.Click the Load unpacked button and choose your extension folder which has the manifest, and your extension should be able to load as seen in the image above.

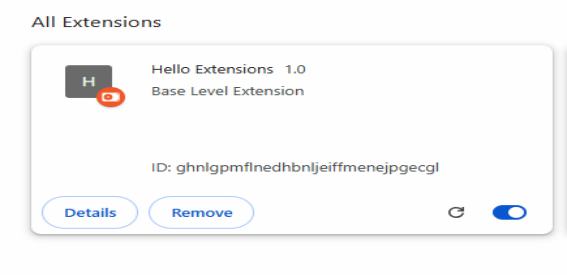
Program

Manifest.json

Manifest.json

```
{
 "name": "Hello Extensions",
 "description": "Base Level Extension",
 "version": "1.0",
 "manifest_version": 3,
 "action": {
  "default_popup": "hello.html",
  "default_icon": "hello_extensions.png"
 }
}
```

Hello.html

```
<html>
 <body>
  <h1>Hello Extensions</h1>
 </body>
</html>
```


Output:
